

## MILLBORN NATIVE MIXES

# BIG COUNTRY

- › Year-round wildlife habitat
- › Great for all native grassland applications

This predominantly warm season grass mix will grow well in most soil conditions and will reach 4'–6' tall at full maturity. The diversity of this mix creates the structure to provide visual appeal and wildlife habitat year-round. Big Country™ is an excellent choice for all native grassland applications although it does not meet the requirements of most conservation programs.

### MIX RATIO

- 43% SWITCHGRASS**
- 21% BIG BLUESTEM**
- 19% INDIANGRASS**
- 10% SIDEOATS GRAMA**
- 4% SLENDER WHEATGRASS**
- 3% CANADA WILDRYE**

\*These amounts are based on percentage of population. Comparable substitutions may be necessary depending on species availability.

### VARIETY PROFILE

Seeding Rate	15 lbs/acre
Seeds per sq.ft	45.7
Seeding Instructions	› If broadcasting seed, multiply the seeding rate times 1.5. › If used in a commercial application, multiply the seeding rate times 2.

**Specialist Establishment Tip:** in all native mixes, you often won't see a mature species during the first season. Weed management and upkeep should be the number one priority during the first year. To give this mix a boost and reduce erosion during establishment, we added QuickGard Sterile Triticale to the mix.
